

Learn how to identify & control hazards in your workplace (and earn NCSO™/NHSATM credits) at the Westman Safety Conference

The Westman Safety Conference is returning to Brandon, MB, on April 18 & 19, 2018, with an assortment of two-, one- and half-day courses that speak to the needs of **all** industries.

Our half-day course, *Hazard Identification & Risk Control*, introduces the basics of identifying and controlling hazards in the workplace. Participants will learn how to properly identify, assess, rank and control hazards; how to conduct hazard assessments; and create safe work procedures, the basic steps of a workplace inspection and the legal requirements for hazard identification and risk control in the workplace.

Derek Pott, Operations Manager with the Construction Safety Association of Manitoba, says that this course offers the knowledge, tools and resources needed to identify, communicate and control new and current hazards on-site.

“This course will prepare workers for on-site hazard assessments, inspections, safe job procedures, Toolbox Talks and safety meetings and will add credits towards National Construction Safety Officer (NCSO™) and National Health & Safety Administrator (NHSATM) designations.”

Hazard Identification & Risk Control is a half-day course offered on April 18, 2018. Seating for this course is limited - to register, visit www.westmansafety.ca.

If you're interested in this course, you might also be interested in *Inspections, Safety Committee Basics* and *Understanding Workplace Safety and Health Enforcement* - all offered at the 2018 Westman Safety Conference!
